EXPERIENCE

Fullstack Developer

Ebix   **July 2022 – Present, Noida, India**

- Developed a web application for company which is used for selling and managing group medical coverage for different organisations, Created Structure for Database from scratch, Created Data flow of application as well also created folder structure for server application as well, Implemented Role and permission for providing Role based access of different modules to different to users accordingly, Migrated Database from MongoDB to Postgres SQL after completion of project according to org requirement
- Created Endowment module UI for BSE EBIX portal in a team of two members, created Different components according to the orgs need, created UI according to the requirement and implemented Redux for state management for API consumption
- Worked on D2C CRM Client and server for creating an web application with use case of managing leads for multiple clients, created Several API's and integrated with client side with authorization, created POC for stored procedure for implementing on server side.
- Worked on created SP's in Ms-sql for client application for managing certificates and reminders for renewing policies.
- Created clean UI for ASP.net application in vanilla javascript for client website.

PROJECTS

Instagram Post scheduler

June 2024 -July 2024

- Created an app using NodeJs, ReactJs, MongoDB, expressJs for scheduling the posts uploaded by user to their Instagram account, user can signup to the application and upload photos and schedule it for daily uploads upto 1 week, I used meta dev API's for integrating and uploading the posts to the user's Instagram account.

Zapier clone

April 2023 – May 2024

- Created a clone of Zapier application with frontend, backend integration, the application was based on monorepo architecture.
- User can login to application and created its own url to trigger any event across several applications, for example a user can set a trigger or create a zap which will be trigger when someone send you and email and the work of zap or trigger can be customised according to the user.
